

7 Azure Use Cases You Must Learn in 2026

Master these practical use cases and level up your Azure skills!

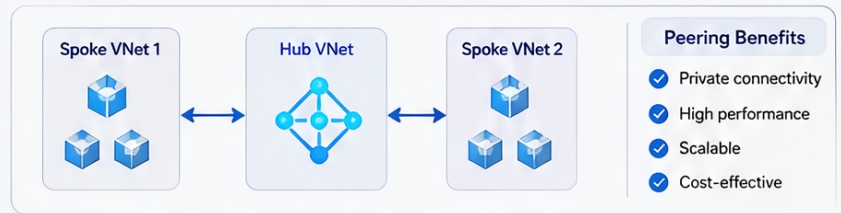

1 Azure VNet: Internet vs NAT Gateway – When to Use What?

- ✓ Internet Gateway → For inbound access to your VNet resources
- ✓ NAT Gateway → For outbound access from private subnets
- ✓ NAT Gateway gives scalable, secure & static outbound connectivity
- ✓ Use Internet Gateway + NSG for inbound security

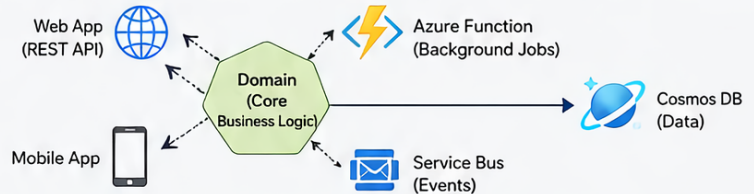

2 Azure VNet Peering Overview

- ✓ Connect VNets privately using Azure backbone
- ✓ Types: Hub-and-Spoke, Full Mesh
- ✓ Supports same region, cross region & global peering
- ✓ No gateway or VPN needed, low latency & high bandwidth

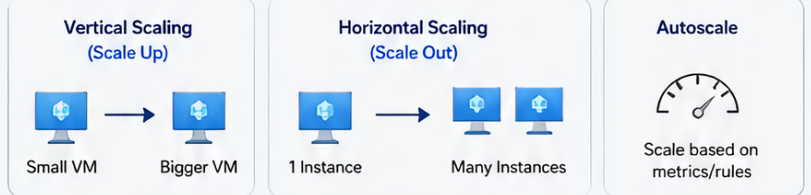

3 Hexagonal Architecture in Azure

- ✓ Keep business logic at the center (domain)
- ✓ Use Azure services as adapters (ports)
- ✓ Improves testability, flexibility & maintainability
- ✓ Services: App Service, Functions, Service Bus, Cosmos DB

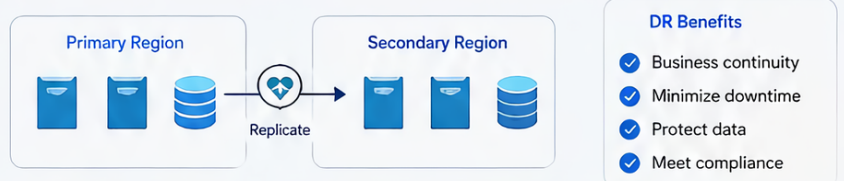

4 Cloud Scaling Patterns in Azure – Breakdown

- ✓ Vertical Scaling – Scale up (bigger VM/sku)
- ✓ Horizontal Scaling – Scale out (more instances)
- ✓ Use Azure Autoscale, VM Scale Sets, Functions
- ✓ Event-driven scaling with Azure Service Bus / Event Grid

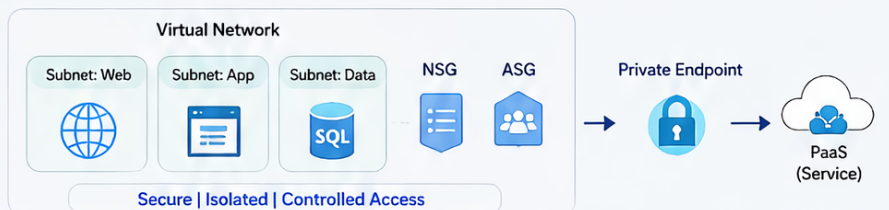

5 Azure Disaster Recovery Strategies

- ✓ Plan for failures, not if, but when
- ✓ Strategies: Backup, Geo-Redundant, Failover
- ✓ Use Azure Site Recovery for VM/DR orchestration
- ✓ Design for RTO (Recovery Time) & RPO (Recovery Point)

6 Azure Virtual Network Segmentation Breakdown

- ✓ Use Subnets to split network logically
- ✓ Secure with NSGs (rules) & ASGs (groups)
- ✓ Use Private Endpoints to access PaaS privately
- ✓ Follow Zero-Trust principles

7 Azure CDN vs SAS Tokens – When to Use What?

- ✓ Use for public content delivery
- ✓ Global caching, low latency
- ✓ Improve performance & availability
- ✓ Example: Images, videos, static files

VS

SAS Tokens

- ✓ Use for secure access to storage resources
- ✓ Time-bound, permission-based access
- ✓ Example: Private files, user uploads, downloads

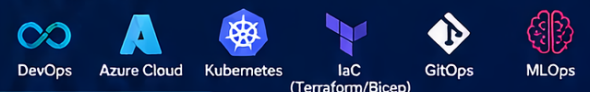

Quick Rule

- CDN → For Performance & Global Delivery
- SAS → For Security & Controlled Access
