

Azure VPN:

Point-to-Site, Site-to-Site & VNet-to-VNet

How to connect securely to Azure: P2S VPN, S2S VPN, and VNet-to-VNet VPN illustrated with real-world examples.

1 Point-to-Site (P2S) VPN

Connect a **single user securely** to an Azure Virtual Network (VNet) using a VPN client.

Real-World Example: IT admin working from home securely connects their laptop to an Azure VM.

2 Site-to-Site (S2S) VPN

Connect entire **office networks** securely to an Azure VNet using a VPN gateway.

Real-World Example: Office ERP application in Azure accessed directly by on-premises office PCs.

3 VNet-to-VNet VPN

Connect two Azure Virtual **Networks** (VNets) securely over a VPN, even between different regions.

Real-World Example: Production VNet in India securely connected to DR site in US for backup.

Encrypted Tunnel
